

MATH 736 FALL 2005

Class Meetings: MW 9:30-10:45 a.m. in EMS E416
[Thanksgiving break November 24–27; Last class December 14]

Instructor: Allen Bell, EMS E404a, 229-5264; e-mail adbell@uwm.edu

Office Hours: My schedule is quite variable, but don't hesitate to drop in any time or contact me by phone or e-mail. If I'm busy, we'll set another time.

Web Page: <http://www.uwm.edu/~adbell/> — then follow the link for Math 736.
(There may or may not be a web page for the class.)

Text: The text is *An Introduction to Noncommutative Noetherian Rings, Second Edition* by K. R. Goodearl and R. B. Warfield, Jr., but we will not always follow it. I may pass out notes to supplement the text – any such notes will be incomplete and probably full of errors.

Homework: I will often leave things as an exercise - this is homework. Fixing the mistakes in my notes is homework. I may also assign explicit homework problems. Your job is to learn as much as possible, and homework helps with that. You can turn in any problems for me to look at. I may ask you to turn in a few problems.

Exams: The only “exam” will be an individual discussion with me some time in December (before the end of classes). You could call this an oral exam, or just a chance for me to see how you're doing in the class.
